

SUNTRACKER Custom Trailers

SUN TRACKER® offers an optional trailer with every model for those who want to tow their boat from place to place.

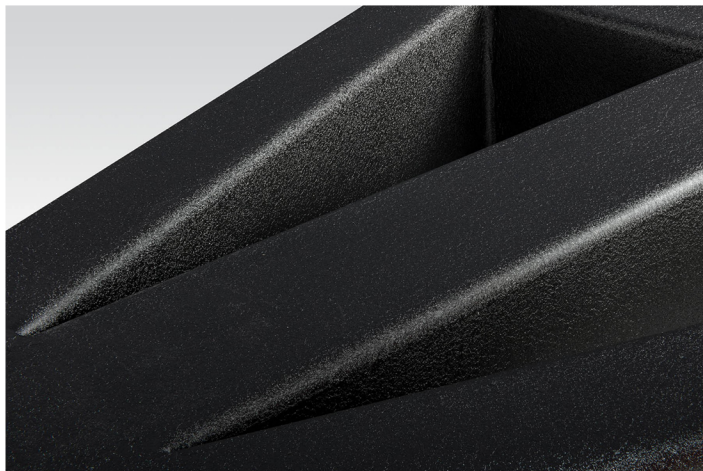

We build each trailer ourselves to match the boat that will ride on it. Every trailer frame features our exclusive GALVASHIELD Impact protection, providing exceptional corrosion and chip resistance.

The GALVASHIELD Impact trailer finish is a 5-mil. thick, matte black, textured powdercoat that improves corrosion resistance while adding chip resistance. The steel tubing is galvanized on the outside and inside and sealed with a flexible clear-coat before it arrives at our plant in Ozark, MO. The trailer frame and components are put through a five-stage wash and then thoroughly dried to ensure perfect adhesion of the powdercoat to the metal.

For the application of the finish, the trailer components receive an electrostatic charge, which attracts the opposite charge in the powdercoat particles. This assures thorough coverage, uniform thickness and minimal waste, all while having virtually no environmental effect.

The finish is then heated to its melting point as it bonds securely to the galvanized metal at the molecular level. The result is a harder, longer-lasting and environmentally friendly finish that protects against corrosion and chipping.

Additionally, we weld—not bolt—our trailers together for more strength and structural integrity. We finish them all with plenty of safety and convenience features you'll appreciate for years to come.
